Abstract of DE19627187

The dispenser (10) places a practice golf ball (114) on a support (108) which is raised relative to a synthetic practice mat (90). The latter is fixed loosely in position on a longitudinal side of the housing (12) of the dispenser. A slightly sloping pipe (54) can be swung against the action of a spring between a stop for a rest position, and a stop (78) for a position above the support. The pipe has an inlet opening which opens upwards, and an outlet opening (56) which opens downwards. A ball magazine (40) is arranged above the inlet opening on the axis (20) of swinging, and is also carried around during the swinging motion.
